NAS **Nordic Automation Systems**

LoRaWAN®
LUMINAIRE CONTROLLER IP54
UL2002

LoRaWAN® Luminaire Controller is a remote controlling device for LED and HID luminaries using 0...10V analog or DALI control signal.

Control commands from/to dedicated application are to be sent/received using LoRaWAN® network.

CE

DALI

OVERVIEW

Universal

Supports LED and HID luminaires.

APPLICATIONS

Luminaires control

Supports customisable dimming profiles

Array control

Allows to control an array of 64 luminaires over the DALI interface

Power monitoring

Monitor used power and luminaire burn time

FEATURES

- DALI interface
- Relay control
- Luminaire intensity control
- IP54
- Surge protection
- Power metering

SPECIFICATIONS

|	
Length:	134.0 mm
Width:	54.0 mm
Depth:	33.0 mm
Weight:	ca 99 g
Operating temperature:	-30°C ... +60°C
Power consumption:	230V -15% .. +10% <1V A
Communication range:	up to 15 km* LoRaWAN®
Tx power:	up to +20 dBm
Rx Sensitivity:	-140 dBm
MAC Layer:	LoRaWAN®
Physical Layer:	LoRa®
Body material:	ABS
IP Rating:	IP54
Communication:	LoRaWAN®

* Communication range is dependent on the location of the sensor and nearest base station.

INTERFACE SPECIFICATIONS

|	
Relay max current:	6A
Surge protection:	IEC 61000-4-5 Class 4 (4kV)
Intensity control output voltage:	0V .. 10V
DALI Interface max number of slaves on (int. power supply):	32

fPort 24 Status Message

* 0 value means that the controller has not received any packages
** Profile ID 255 is used when there is no active provile and the controller is manually controlled.
*** Profile sequence 255 is used when the current actual light level is not according to the profile configuration (e.g. it has been manually overwritten).

fPort 25 Usage Message*

Byte 0	Byte 1	Byte ..	Byte n
Addr	Reported fields	Payload	
uint_8 0..255**			

Bit #	Parameter	Type and unit
0	Active energy total	uint32, Wh
1	Active energy instant	uint16, W
2	Load side energy total	uint32, Wh
3	Load side energy instant	uint16, W
4	Power factor instant	uint8 ***
5	System voltage	uint8, V
6	RFU	
7	RFU	

* If driver supports. Also drivers need to have short addresses assigned.
** 0xFF values measured by the controller. If driver value is available, it is preferred over internal measurement.
*** Needs to be dived by 100.

Usage parameters are reported after driver address in order of the reported fields mapping. If more than one driver are connected, then next drivers address is reported after the last parameter of the first driver and followed by the parameters in the same logic.

  Profile address in HEX

    02

  Profile HEX address converted to DALI address

    Single device 1

  DALI status in HEX

    04

  HEX value converted to status

    Ballast is off

2nd Device status

  Profile address in HEX

    06

  Profile HEX address converted to DALI address

    Single device 3

  DALI status in HEX

    02

  HEX value converted to status

    Lamp is burned out

3rd Device status

Profile address in HEX

```
0C
```

Profile HEX address converted to DALI address

Single device 6

DALI status in HEX

```
02
```

HEX value converted to status

Lamp is burned out

Set Dimming level

Byte 0	Byte 1	Byte 2	Byte *	Byte *	Byte 9	Byte 10
Header	Addr.	Dim level	Addr.	Dim level	Addr.	Dim level
01	0..255	0..100	0..255	0..100	0..255	0..100

Message sample

Message goal: Set all luminaires to 100%

Header

Select Header HEX code

```
01
```

Destination address

Convert DALI `Broadcast` address to HEX

```
FE
```

Dimming level

Convert light dimming level `100%` from decimal to HEX

```
64
```

Compile message for sending (HEX)

```
01FE64
```

Control value in base64 to control after sending

```
Af5k
```

Custom DALI request

Byte 0	Byte 1	Byte 2	Byte *	Byte *	Byte 9	Byte 10
Header	Addr.	Query	Addr.	Query	Addr.	Query
03	0..255	0..255	0..255	0..255	0..255	0..255

Message sample

Message goal: Ask Max level, Min Level, Power on level, System failure level and Fade time/rate from device 36

Header

    Select Header HEX code

```
03
```

1st Query

    Destination address

        Convert DALI `Single device 36` address to HEX

```
48
```

    Convert Max level query code `161` to HEX

```
A1
```

2nd Query

    Destination address

        Convert DALI `Single device 36` address to HEX

```
48
```

    Convert Min level query code `162` to HEX

```
A2
```

3rd Query

    Destination address

        Convert DALI `Single device 36` address to HEX

```
48
```

    Convert Power on level query code `163` to HEX

```
A3
```

4th Query

    Destination address

        Convert DALI `Single device 36` address to HEX

```
48
```

    Convert System failure level query code `164` to HEX

```
A4
```

5th Query

    Destination address

        Convert DALI `Single device 36` address to HEX

            `48`

    Convert Fade time/rate query code `165` to HEX

        `A5`

Compile message for sending (HEX)

        `03|48A1|48A2|48A3|48A4|48A5`

Control value in base64 to control after sending

        `A0ihSKJIo0ikSKU=`

Answer for custom DALI request

Byte 0	Byte 1	Byte 2	Byte 3	Byte *	Byte *	Byte *	Byte 47	Byte 48	Byte 49
Header	Addr.	Query	Answer	Addr.	Query	Answer	Addr.	Query	Answer
03	0..255	0..255	0..255	0..255	0..255	0..255	0..255	0..255	0..255

Message sample

Message in base64

    `BEih/kiiqEij/kik/kilBw==`

Message decoded to hex

    `04|48A1FE|48A2A8|48A3FE|48A4FE|48A507`

Header `04` decoded

        `Answer for custom DALI request`

NAS Nordic Automation Systems

1st Answer

Profile address in HEX

```
48
```

Profile HEX address converted to DALI address

Single device `36`

Query in HEX

```
A1
```

HEX value converted to decimal

161

Decimal value translated to query

Max level

Answer in HEX

```
FE
```

HEX value converted to decimal

254

2nd Answer

Profile address in HEX

```
48
```

Profile HEX address converted to DALI address

Single device `36`

Query in HEX

```
A2
```

HEX value converted to decimal

162

Decimal value translated to query

Min level

Answer in HEX

```
A8
```

HEX value converted to decimal

168

3rd Answer

Profile address in HEX

```
48
```

Profile HEX address converted to DALI address

```
Single device 36
```

Query in HEX

```
A3
```

HEX value converted to decimal

```
163
```

Decimal value translated to query

```
Power on level
```

Answer in HEX

```
FE
```

HEX value converted to decimal

```
254
```

4th Answer

Profile address in HEX

```
48
```

Profile HEX address converted to DALI address

```
Single device 36
```

Query in HEX

```
A4
```

HEX value converted to decimal

```
164
```

Decimal value translated to query

```
Failure level
```

Answer in HEX

```
FE
```

HEX value converted to decimal

```
254
```

Profile address in HEX

```
48
```

Profile HEX address converted to DALI address

Single device 36

Query in HEX

```
A5
```

HEX value converted to decimal

165

Decimal value translated to query

Fade time/rate

Answer in HEX

```
07
```

HEX value converted to status

<0.7s / 45 steps/s

Custom DALI command

Byte 0	Byte 1	Byte ..	Byte 50
Header	Data	Data	Data
04	0..255	0..255	0..255

Message sample

Message goal: Set Single device 1 minimum light level to 127.

Header

Select Header HEX code

```
04
```

DALI command

DALI command in HEX

```
027F0321032B
```

Compile message for sending (HEX)

```
04|027F0321032B
```

Control value in base64 to control after sending

BAJ/AyEDKw==

fPort 99 Boot/Debug Message

PINOUT

Pinout is also marked on the controller

Connector	Description
Power Connections:	
$L_{(in)}$	230V AC line input
N	230V AC neutral input/output
$L_{(out)}$	AC 230V output
$\overline{L}_{(out)}$	Inverted AC 230V output
Control outputs:	
DALI+/DALI-	DALI control to driver
0..10V	Analog control 0(1)..10V to driver

REVISION HISTORY

1.0 - First version

1.1 - Added configuration details.

1.2 - Added configuration details.

1.3 - Updated communication protocol

1.4 - Wiring diagram and ordering information

1.5 - fw 0.5.0 support, power metering

2.0 - Split from UL2011 datasheet

2.1 - Updated to UL2002

2.2 - New format for usage message. Calendar user configurable

2.3 - Added Multicast configuration
